

## Fleet Performance & Delivery Efficiency Dashboard Summary

### Project Overview

This dashboard analyzes fleet operations and delivery performance using Power BI. It provides insights into delivery efficiency, fuel consumption, vehicle maintenance, and operational costs, helping stakeholders monitor fleet performance and support data-driven decision-making.

### Project Objectives

- Monitor key fleet performance indicators.
- Analyze on-time delivery performance across destinations.
- Evaluate fuel efficiency and fuel consumption trends.
- Compare maintenance costs across fleet vehicles.
- Identify opportunities to improve operational efficiency and reduce transportation costs.

### Expected Output

An interactive transport operations dashboard that enables users to optimize fleet utilization, monitor delivery performance, analyze fuel efficiency, evaluate maintenance costs, and support operational decision-making.

### Key Insights

- **50 trips** were analyzed, with **30 completed on time**, resulting in an **On-Time Delivery Rate of 60%**.
- The fleet consumed **4.58K liters of fuel**, achieving an **average fuel efficiency of 11.57 km/L** and an **average operating cost of ₹10.08 per km**.
- **Delhi** and **Pune** recorded the highest on-time delivery rate (**88%**), while **Mumbai** recorded the lowest (**33%**).
- Fuel efficiency fluctuated throughout the analysis period, indicating varying vehicle performance and operating conditions.
- Vehicles **V03** and **V05** accounted for the highest average maintenance costs, suggesting they require closer maintenance monitoring.

## **Recommendations**

- Improve route planning and driver scheduling to increase the on-time delivery rate.
- Perform preventive maintenance on high-maintenance vehicles to reduce operating costs.
- Monitor fuel efficiency regularly to identify inefficient vehicles and optimize fuel usage.
- Investigate delivery delays in lower-performing destinations and implement corrective actions.
- Continue tracking fleet performance using interactive dashboards to support operational decision-making.
